Massage

Pet Project

Overview

This service aimed to make it even easier to attend massages both for HR and other colleagues. It contains convenient tools for creating, editing, and deleting records, schedule representation. Messages about any changes will be sent via email and approved proposals with all data will be automatically sent to Google Calendar with notification.

User

USR-01. User roles

This service has 3 roles so far:
- HRs - have access to everyone and everything, have the ability to create accounts for non-quantum-domain emails
- Simple user - has quantumobile domain, can create, edit and delete its own records
- Massage Therapist - can have any email, but can be registered only by HR, has its own schedule

USR-02. Authentication

This service has no register forms, you just press the "Login with Google" button. If you have quantumobile domain and are not a user of this service yet, your account will be created automatically, if you are already the user then you'll simply log into your account. Only the user that is in the Database can be logged in, even if it has a non-quantumobile domain. Only the Admin/HR can create users' accounts manually and operate with them.

USR-03. HR

HR has full access to all. They can manually create/delete users.

USR-04. Massage Therapist

Massage therapists have their own schedules, their accounts can only be added manually by HR/Admin

USR-05. Common User

Common users mostly with the quantumobile domain take the major part of all accounts. This user can only be logged in if its account has quantumobile domain or is in the Database. They can perform creating, editing, and deleting their own records on massage

Schedule

SCHDL-01. Schedule creation

Creating your own schedule for massage therapists goes by this way. We have to choose any days of week and working hours. In case therapist wants to work in different time e.g.:
Tuesday from 10:00 - 16:00
Wednesday from 11:00 - 17:00
Therapist has to make two schedules - one for Tuesday and one for Wednesday. In other common cases such as both Tuesday and Wednesday from 10 a.m. till 4 p.m. we use only one schedule. Schedule has two important to notice fields such as **valid from** & **valid till**. These fields show us a time period of schedule availability. Once it's time for it to end, the therapist has to prolong his own schedule.

SCHDL-02. Schedule editing

Editing specific schedules goes in this way. We choose our schedule, setting working hours and days. All slots from the edited schedule count as inactive and other slots from the new schedule will be created. So, basically, the edited schedule is the new schedule.

SCHDL-03. Schedule deleting

Deleting specific schedules goes in this way. We choose our schedule and press delete. All slots from the deleted schedule are getting suspended.

Slot

SLOT-01. Slots creation

After adding the schedule the slots will be created due to following working days and hours. When their status is active, only in that way they count as actual. You can apply for a massage session only in the timeframe of the individual slot.

SLOT-02. Slots editing

For editing a specific slot you should pick it and make changes. The change will create a new Slot turning old to inactive.

SLOT-03. Slots deleting

For deleting a specific slot you should pick it and press delete. This action will fully delete individual slot

Massage

MSG-01. Therapist schedule

Every therapist can have schedules. Each schedule is configured and published by a therapist.

MSG-02. Creating massage record

Users who want to sign up for massage have to choose from open slots, pick Therapist and create massage events due to Slot. If picked time is already in use, the massage can not be created. IMPORTANT: massage time can be within strict hours (e.g. 14:00-15:00, NOT 14:15-15:15).

MSG-03. Editing massage record

Editing is almost the same as creating. Records still also have to be within strict hours and should not be overlapped.

MSG-04. Deleting massage record

Deleting the individual massage event will permanently clear this event in Google Calendar both for Therapist and Client.
